NOTE: Before proceeding with this project, read the pages about cutting, gluing and painting PVC pipe. You’ll find the links on the Workshop’s home page.

CLAMP AND DOWEL HOLDER

Materials

4” to 6” diameter PVC Drain Pipe
Self-Tapping Wood Screws and Washers

Directions

Cut the pipe to appropriate length for your workbench, or wherever you want to place it.

Drill 1/2” holes about 12 inches apart. Fasten the pipe by driving in the self-tapping screws through the 1/2” holes.

I use it to hold my long clamps and another one to hold wooden dowels.
