

MAKE A SIMPLE LIGHT STAND WITH A HOME MADE 5-WAY FITTING

Parts: 3/4" long x 3/8" bolt, nut, washer. Length of 3/4" pipe, two 3/4" end caps, one 3/4" cross, four 3/4" ells. Cut pipe into the lengths that suit you.

Drill a 3/8" hole into one cap and cross. Drill a 7/8" hole on the "other side" of the cross. Assemble using a socket set. Tighten, then insert the legs and upright and you've got a handy, inexpensive light stand for shop, photography or whatever. If you want to store it away, don't glue the upright (or legs, if you want) for easy knock-down.
