

# TARGET FRAME

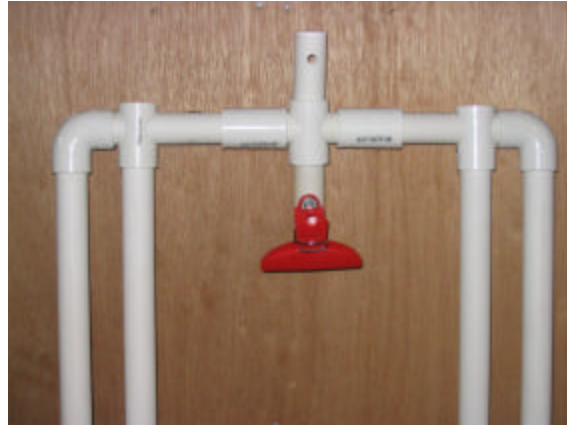

The bottom four “legs” are not glued so they can be removed. Inserting different lengths will make the target higher or lower. The A-frame design makes the target a bit sturdier.

Next Page

1-1/8 inch hole carefully drilled into a 3/4-inch coupler. I used a Forstner bit.

A-frame stand folds up for storage/transport.

The red clip is fastened to a short length of pipe with a bolt. The clip hold the target. Another clip can be fastened to the other pipe. Or, the additional pipe can be eliminated.

NOTE: No dimensions are given, since the Target Frame can be made any size needed. If anyone has suggestions to make the project better, more useable, please let me know.
